

SHAPING & MODELING INSTRUCTIONS

1. Start close to the trunk. Hold with your thumb and index finger where the branch and trunk meet. With your other hand take the branch between your fingers as shown in the picture keeping your thumb tight to the trunk (avoid breaking the branch from the trunk).

Bend the branch as far as you like.

2. Move your hand out a little farther. Hold the branch and with the other hand (index and thumb), shape it as shown in the picture, bending it in a natural way.

3. Hold the branch closer to the end, making sure it follows the natural line of a branch.

4. Spread the branches so that they and the leaves are naturally divided over the tree, giving it a beautiful natural look.

DIY POTTING INSTRUCTIONS

This all you need

Styrofoam a planter + topping of your choice

1. Cut a sheet of Styrofoam in squares to fit upright, 1" to 2" below the rim of the chosen planter.

2. Place the plant in the center of the planter making sure that the bottom has enough Styrofoam-filling to lift the inner-liner 2" to 3" below the rim of the planter.

3. Use the remaining squares to fill-in the sides between the inner-liner and outer planter, securing the plant.

4. Make sure the plant is secured in the middle and fill the remaining space with a topping of your choice.

5. Now the plant is ready to be shaped and placed in the chosen environment to enjoy.
